

Protect-It™ MAXI

Economical solution for improving warehouse safety

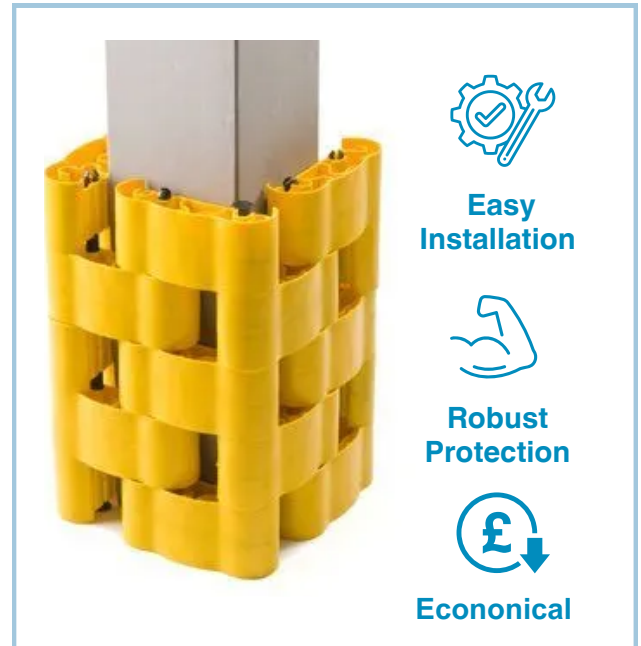

Protect-It™ MAXI column guards are designed to minimise damage to building columns especially suited to mezzanine floor columns. The modular design enables MAXI to fit columns and structures of most shapes and sizes. An assembled MAXI guard provides a protection height of 500mm and multiple units can be stacked to protect greater heights (e.g. 1m or 1.5m).

Features

- Interlocking, modular construction that adapts to suit your site.
- Easy 'wrap around' installation with no drilling, velcro or fasteners (except for wall installations).
- Low purchase cost,
- simple installation.
- Individual replacement of damaged modules.
- Suitable for use in cold stores down to -40°C
- Easily removed for inspections

Easy Installation

Protect-it™ MAXI column guards can be installed on columns, walls and structures of most shapes and sizes. Each guard has four pin connector holes (see below) which provide flexible installation options. Use the pin connector holes that best suit the shape and size of your column, wall or structure

Safety Tested

Fully testing using Finite Element Analysis (FEA):

- With Protect-it MAXI column guards installed on a 100UC_15* (4") column, no column damage was evident after a 2.7 ton forklift impact at 2km/hour.
- With Protect-it MAXI column guards installed on a 200UC_59* (8") column, no column damage was evident after a 2.7 ton forklift impact at 6km/hour.
